Vitamin K2 Oil

Cat. No. CEFX-107

Lot. No. (See product label)

Introduction

Description	Vitamin K2 is a naturally occurring vitamin that contains the basic structure of menaquinone and has anti-hemorrhagic effects. It is a yellow crystal or oily liquid at room temperature, insoluble in water, easily soluble in organic solvents and vegetable oils, and heat-resistant, but easily destroyed by light. It can promote the synthesis of prothrombinogen by liver and regulate the synthesis of coagulation factors VII, IX and X, thus accelerating blood coagulation.

Product Information

Form	liquid
CAS No.	84-81-1
Molecular Weight	580.88

Storage and Shipping Information

Storage	Keep sealed, away from light and in a dry place (recommended storage temperature below 27°C).
