

dihydromonacolin L-[lovastatin nonaketide synthase] thioesterase

Cat. No. EXWM-3565 Lot. No. (See product label)

| Introduction | |
|----------------------------------|--|
| Description | Dihydromonacolin L acid is synthesized while bound to an acyl-carrier protein domain of the lovastatin nonaketide synthase (EC 2.3.1.161). Since that enzyme lacks a thioesterase domain, release of the dihydromonacolin L acid moiety from the polyketide synthase requires this dedicated enzyme. LovG |
| Synonyms | |
| Product Information | |
| Form | Liquid or lyophilized powder |
| EC Number | EC 3.1.2.31 |
| Reaction | dihydromonacolin L-[lovastatin nonaketide synthase] + H2O = holo-[lovastatin nonaketide synthase] + dihydromonacolin L acid |
| Notes | This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications. |
| Storage and Shipping Information | |
| Storage | Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C. |
