

Native Xanthomonas sp. α -1 \rightarrow (2,3,4) Fucosidase solution

Cat. No. NATE-0262

Lot. No. (See product label)

Introduction

Description Tissue alpha-L-fucosidase is an enzyme that in humans is encoded by the FUCA1 gene. Alpha-Fucosidase is an enzyme that breaks down fucose. Fucosidosis is an autosomal recessive lysosomal storage disease caused by defective alpha-L-fucosidase with accumulation of fucose in the tissues. Different phenotypes include clinical features such as neurologic deterioration, growth retardation, visceromegaly, and seizures in a severe early form; coarse facial features, angiokeratoma corporis diffusum, spasticity and delayed psychomotor development in a longer surviving form; and an unusual spondylometaphyseal dysplasia in yet another form.

Synonyms α -1 \rightarrow (2,3,4) Fucosidase; alpha-L-fucosidase; Alpha-Fucosidase; FUCA1; FUCA; EC 3.2.1.51; 9037-65-4

Product Information

Source Xanthomonas sp.

Form buffered aqueous solution, Solution in 20 mM Tris-HCl, pH 7.5, 25 mM NaCl

EC Number EC 3.2.1.51

CAS No. 9037-65-4

Activity > 0.5 units/mg protein

Unit Definition One unit will hydrolyze 1 μ mole fucose from 3-fucosyllactose per min at pH 5.0 at 37°C.

Usage and Packaging

Package vial of 0.004 unit

Storage and Shipping Information

Storage 2-8°C
