

Native Chicken α -N-Acetylgalactosaminidase

Cat. No. NATE-0755

Lot. No. (See product label)

Introduction

Description α -N-acetylgalactosaminidase (EC 3.2.1.49) is a glycoside hydrolase from bacteria and animals, also known as nagalase. The human gene that codes for this enzyme is NAGA. Mutations in this gene and the deficiency in alpha-N-acetylgalactosaminidase activity have been identified as the cause of Schindler disease.

Synonyms EC 3.2.1.49; 9075-63-2; α -N-acetylgalactosaminidase; Alpha-N-acetylgalactosaminidase; α -acetylgalactosaminidase; N-acetyl- α -D-galactosaminidase; N-acetyl- α -galactosaminidase; α -NAGAL; α -NAGA; α -GalNAcase

Product Information

Species	Chicken
Source	Chicken Liver
EC Number	EC 3.2.1.49
CAS No.	9075-63-2
