

## **Native corn Nitrate Reductase**

Cat. No. NATE-0474

Lot. No. (See product label)

## Introduction

**Description** Nitrate reductase (NADH) is an enzyme with system name nitrite:NAD+ oxidoreductase. This enzyme

catalises the following chemical reaction:nitrite + NAD+ + H2O↔ nitrate + NADH + H+. Nitrate

reductase us an iron-sulfur molybdenum flavoprotein.

Applications Catalyzes the NADH-dependent reduction of nitrate to nitrite.

Synonyms EC 1.7.1.1; 9013-03-0; Nitrate reductase; NADH; nitrate reductase; NADH-nitrate reductase; NADH-

dependent nitrate reductase; assimilatory NADH:nitrate reductase; nitrate reductase (NADH2);

NADH2:nitrate oxidoreductase; assimilatory nitrate reductase

## **Product Information**

**Source** Corn

**Form** buffered aqueous glycerol solution

**EC Number** EC 1.7.1.1

**CAS No.** 9013-03-0

**Activity** > 4 units/mL

Buffer Solution in 0.01 M EDTA, 50 mM MOPS, pH 7.0, containing 50% glycerol and 1 mg per mL BSA

**Unit** One unit will reduce 1.0 μmole of nitrate to nitrite per minute in a NADH system at pH 7.3 at 30°C.

Definition

## Storage and Shipping Information

*Stability* −70°C
