

Hydroxyacid Oxidase 1 from Human, Recombinant

Cat. No. NATE-3041

Lot. No. (See product label)

Introduction

Description Gly

Glycolate oxidase (HAO1) is a part of the superfamily of the alpha hydroxy acid oxidases (HAO) enzymes. HAO1 catalyses the FMN mediated oxidation of glycolate to glyoxylate and glyoxylate to oxalate by reducing oxygen to hydrogen peroxide. HAO1 is expressed mainly in the liver and pancreas and is most active on twocarbon substrates such as glycolate. HAO1 is the main cause of hyperoxaluria, a disorder in which large deposits of calcium oxalate form kidney stones.

Product Information

Source Escherichia Coli.

Form HAO1 protein solution (1mg/ml) contains 20% glycerol, 20mM Tris-Hcl (pH8.0) and 0.5M NaCl.

EC Number EC 1.1.3.15

CAS No. 9028-71-1

Molecular 45.0kDa

Weight

Purity > 95 % (SDS-PAGE)

Activity > 3000 pmol/min/ug

Storage and Shipping Information

Storage Store at -20°C.

Tel: 1-631-562-8517 1-516-512-3133 **Email:** info@creative-enzymes.com
