

## Phytase from Aspergillus niger (food grade)

Cat. No. PYAG-100

Lot. No. (See product label)

## Introduction

**Description** Phytase is a general term for enzymes that catalyze the hydrolysis of phytic acid and its salts to inositol

and phosphoric acid. Phytic acid, also known as inositol 6-phosphate, is the reservoir of phosphoric acid. The mineral elements are separated from the complex by phytase, increasing the nutritional value of the

minerals. Phytase is widely used in food, feed, medicine, and other fields.

## **Product Information**

**Source** Aspergillus niger

**Form** powder

**EC Number** EC3.1.3.8
