

Native Amano Lipase from Pseudomonas fluorescens

Cat. No. CEFX-121

Lot. No. (See product label)

Introduction

Applications Native Amano Lipase from Pseudomonas fluorescens can be used as a biocatalyst in the: Hydrolysis and transesterification of parabens (para-hydroxybenzoic acid esters). Enzymatic kinetic resolution of chlorohydrins. Regio-selective acylation of andrographolide with different acylating agents to synthesize andrographolide derivatives.

Product Information

Source Pseudomonas fluorescens

Form Powder

EC Number 232-619-9

CAS No. 9001-62-1

Activity 20,000 U/g

Storage and Shipping Information

Storage Sealed, dark, dry, at cool place
