

Immunoglobulin Peptide

Cat. No. CEFX-152

Lot. No. (See product label)

Introduction

Description Immunoglobulin peptide is a small molecule peptide decomposed from immunoglobulin, which has a variety of biological activities and immunomodulatory functions. Immunoglobulin peptide can regulate the activity of immune cells by binding to receptors, promote the proliferation and differentiation of immune cells, and participate in the process of regulating immune responses.

Applications Immunoglobulin peptides can also exert antibacterial, antiviral and antitumor activities by directly acting on infectious pathogens or tumor cells. Due to its small molecular structure, immunoglobulin peptide has high penetrability and bioavailability, and can be more easily absorbed and utilized by the body.

Product Information

Appearance Off-white powder

Molecular Weight <500 Da

Purity 99%

Solubility Water-soluble

Usage and Packaging

Package 1kg, 5kg, 10kg aluminum foil vacuum bag; or 20kg, 25kg Fiber Drum

Storage and Shipping Information

Storage Store in a cool, ventilated and dry place, avoid direct sunlight.
