

N-acetylhexosamine 1-kinase from Bifidobacterium longum, Recombinant

Cat. No. NATE-1494

Lot. No. (See product label)

Introduction

Description N-acetylhexosamine 1-kinase (EC 2.7.1.162, NahK, LnpB, N-acetylgalactosamine/N-acetylglucosamine 1-kinase) is an enzyme with systematic name ATP:N-acetyl-D-hexosamine 1-phosphotransferase. This enzyme catalyses the following chemical reaction: $\text{ATP} + \text{N-acetyl-D-hexosamine} \rightarrow \text{ADP} + \text{N-acetyl-alpha-D-hexosamine 1-phosphate}$. This enzyme is involved in the lacto-N-biose I/galacto-N-biose degradation pathway in the probiotic bacterium Bifidobacterium longum.

Synonyms EC 2.7.1.162; NahK; LnpB; N-acetylgalactosamine/N-acetylglucosamine 1-kinase; ATP:N-acetyl-D-hexosamine 1-phosphotransferase

Product Information

Species Bifidobacterium longum

Source E. coli

EC Number EC 2.7.1.162

Molecular Weight 40 kDa

Purity min 95% by SDS-PAGE

Unit Definition One unit is defined as the amount of enzyme that catalyzes the formation of 1 μmol of GlcNAc-1-P from GlcNAc and ATP per minute at 37 °C.
