

Native Candida sp. Invertase

Cat. No. DIA-205

Lot. No. (See product label)

Introduction

Description Invertase is an enzyme that catalyzes the hydrolysis (breakdown) of sucrose (table sugar). The resulting

mixture of fructose and glucose is called inverted sugar syrup. Related to invertases are sucrases. Invertases and sucrases hydrolyze sucrose to give the same mixture of glucose and fructose. Invertases

cleave the O-C(fructose) bond, whereas the sucrases cleave the O-C(glucose) bond.

Applications This enzyme is useful for enzymatic determination of saccharose and for the structure investigation of

carbohydrates containing ß-D-fructofuranoside residue.

Synonyms EC 3.2.1.26; saccharase; glucosucrase; beta-h-fructosidase; beta-fructosidase; invertin; sucrase;

maxinvert L 1000; fructosylinvertase; alkaline invertase; acid invertase; beta-fructofuranosidase

Product Information

Source Candida sp.

Appearance White amorphous powder, lyophilized

EC Number EC 3.2.1.26

CAS No. 9001-57-4

Molecular

approx. 260 kDa

Weight
Activity

Gradel 100U/mg-solid or more (containing approx. 70% of stabilizer)

pH Stability pH 4.0-6.0 (50°C, 10min)

Optimum pH 3.5-4.0

Thermal

below 60°C (pH 4.5, 10min)

stability

Optimum

60-70°C

temperature

Michaelis 1.5

1.5×10⁻²M (Saccharose)

Constant

Structure Glycoprotein containing ca. 50% of carbohydrates

Specificity The enzyme hydrolyzes saccharose and raffinose, but does not hydrolyze inulin and melezitose.

Stabilizers KH₂PO₄

Storage and Shipping Information

Stability Stable at-20°C for at least one year
