

Microorganism blend for Denitrification Treatment in Waste Water

Cat. No. WME-2710

Lot. No. (See product label)

Introduction

Description	WME-2710 contains various selected microorganisms, is our superior product specially applied in waste water treatment and bioremediation. It is suitable to aerobic treatment system and can be widely used in wastewater treatment of urban domestic, slaughterhouse, coking, tannery, and waste leachate, etc.
Applications	It is significantly effective in the process of ammonia nitrogen removal of sewage treatment facilities, crashed system recovery, and improving the handling ability to nitrification system in cold seasons.
Synonyms	Product for Denitrification Treatment in Waste Water

Product Information

Form	Tan liquid
Contaminants	Bacteria Count: 1×10^9 /g
pH Stability	6.0 - 8.0
Optimum pH	7
Thermal stability	10°C -45°C
Optimum temperature	20°C - 30°C
