

Factor Xa Chromogenic Substrate 1

Cat. No. CSUB-0618

Lot. No. (See product label)

Introduction

Description Chromogenic substrates are peptides that react with proteolytic enzymes under the formation of color.

They are made synthetically and are designed to possess a selectivity similar to that of the natural substrate for the enzyme. Attached to the peptide part of the chromogenic substrate is a chemical group which when released after the enzyme cleavage gives rise to color. The color change can be

followed spectrophotometrically and is proportional to the proteolytic activity.

Applications For research applications. Chromogenic substrate for Factor Xa. May be used for development of anti-

XA chromogenic assays.

Synonyms Chromogenic Substrate for Factor Xa; Chromogenic Substrate R1; Chromogenic Substrate; Factor Xa

Chromogenic Substrate

Product Information

Form Lyophizied powder

CAS No. 115388-96-0

Molecular

C28H39N11O7, 2HCl

Formula Molecular

641.7 Da (basic structure); 714.7 Da* (*2HCl included)

Weight

Purity > 95%

Concentration about 39 μMoles/vial

Solubility >= 5 mg/mL in H2O or Tris buffer

Substrates Factor Xa

Storage and Shipping Information

Stability Lyophilized product: 30 months at 2-8°C. Reconstituted product: 7 days at room temperature (18-

25°C); 3 months at 2-8 °C. Do not freeze
