

Native Cucumis melo α -Galactosidase I, Alkaline

Cat. No. NATE-0291

Lot. No. (See product label)

Introduction

Description Alpha-galactosidase is a glycoside hydrolase enzyme that hydrolyses the terminal

alpha-galactosyl moieties from glycolipids and glycoproteins. It is encoded by the GLA gene. Two recombinant forms of alpha-galactosidase are called agalsidase alfa

(INN) and agalsidase beta (INN).

Applications Alkaline α -Galactosidase I was used to assay enzyme activity with 2 mmp-

nitrophenyl- α -d-galactoside as substrate at pH 6.5 to compare with the enzyme activity of α -Gal A isolated and purified from Sf-9 insect cells infected with a

recombinant baculovirus encoding normal $\alpha\text{-Gal}\ A$ gene.

Synonyms Alpha-Galactosidase; Galactosidase; EC 3.2.1.22; GLA; GALA; melibiase; α -D-

galactosidase; α-galactosidase A; α-galactoside galactohydrolase

Product Information

Source Cucumis melo

Form The product is supplied as a lyophilized powder containing Tris-HCl buffer salts,

DTT, EDTA, and NaCl.

EC Number EC 3.2.1.22

CAS No. 9025-35-8

Molecular Weight apparent mol wt ~84 kDa by SDS-PAGE

Unit Definition One unit will hydrolyze 1.0 μmole of p-nitrophenyl α-D-galactoside to p-nitrophenol

and D-galactose per minute at pH 7.8 at 30°C.

Storage and Shipping Information

Storage −20°C
