

## **β-amyrin 28-monooxygenase**

Cat. No. EXWM-0803

Lot. No. (See product label)

## Introduction

**Description** The enzyme, found in plants, is involved in the biosynthesis of oleanane-type

triterpenoids, such as ginsenoside Ro. The enzyme from Medicago trunculata (CYP716A12) can also convert  $\alpha$ -amyrin and lupeol to ursolic acid and betulinic

acid, respectively.

**Synonyms** CYP716A52v2; CYP716A12; β-amyrin 28-oxidase

**Product Information** 

**Form** Liquid or lyophilized powder

**EC Number** EC 1.14.13.201

**Reaction**  $\beta$ -amyrin + 3 O2 + 3 NADPH + 3 H+ = oleanolate + 3 NADP+ + 4 H2O (overall

reaction); (1a)  $\beta$ -amyrin + O2 + NADPH + H+ = erythrodiol + NADP+ + H2O; (1b) erythrodiol + O2 + NADPH + H+ = oleanolic aldehyde + NADP+ + 2 H2O; (1c) oleanolic aldehyde + O2 + NADPH + H+ = oleanolate + NADP+ + H2O

**Notes** This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

Storage and Shipping Information

**Storage** Store it at +4 °C for short term. For long term storage, store it at -20 °C $\sim$ -80 °C.
