

stearoyl-[acyl-carrier-protein] 9-desaturase

Cat. No. EXWM-0982

Lot. No. (See product label)

Introduction

Description The enzyme is found in the lumen of plastids, where de novo biosynthesis of fatty acids occurs, and acts on freshly synthesized saturated fatty acids that are still linked to acyl-carrier protein. The enzyme determines the position of the double bond by its distance from the carboxylic acid end of the fatty acid. It also acts on palmitoyl-[acyl-carrier-protein].

Synonyms stearyl acyl carrier protein desaturase; stearyl-ACP desaturase; acyl-[acyl-carrier-protein] desaturase; acyl-[acyl-carrier protein],hydrogen-donor:oxygen oxidoreductase

Product Information

Form Liquid or lyophilized powder

EC Number EC 1.14.19.2

CAS No. 37256-86-3

Reaction $\text{stearoyl-[acyl-carrier protein]} + 2 \text{ reduced ferredoxin [iron-sulfur] cluster} + \text{O}_2 + 2 \text{ H}^+ = \text{oleoyl-[acyl-carrier protein]} + 2 \text{ oxidized ferredoxin [iron-sulfur] cluster} + 2 \text{ H}_2\text{O}$

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
