

(R)-benzylsuccinyl-CoA dehydrogenase

Cat. No. EXWM-1410

Lot. No. (See product label)

Introduction

Description Requires FAD as prosthetic group. Unlike other acyl-CoA dehydrogenases, this

enzyme exhibits high substrate- and enantiomer specificity; it is highly specific for (R)-benzylsuccinyl-CoA and is inhibited by (S)-benzylsuccinyl-CoA. Forms the third

step in the anaerobic toluene metabolic pathway in Thauera aromatica.

Ferricenium ion is an effective artificial electron acceptor.

Synonyms BbsG; (R)-benzylsuccinyl-CoA:(acceptor) oxidoreductase

Product Information

Form Liquid or lyophilized powder

EC Number EC 1.3.8.3

Reaction (R)-2-benzylsuccinyl-CoA + electron-transfer flavoprotein = (E)-2-

benzylidenesuccinyl-CoA + reduced electron-transfer flavoprotein

Notes This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C \sim -80 °C.
