

## urocanate reductase

Cat. No. EXWM-1435

Lot. No. (See product label)

## Introduction

**Description** The enzyme from the bacterium Shewanella oneidensis MR-1 contains a noncovalently-bound FAD and a

covalently-bound FMN. It functions as part of an anaerobic electron transfer chain that utilizes urocanate as the terminal electron acceptor. The activity has been demonstrated with the artificial donor reduced

methyl viologen.

**Synonyms** urdA (gene name)

## **Product Information**

**Form** Liquid or lyophilized powder

**EC Number** EC 1.3.99.33

**Reaction** dihydrourocanate + acceptor = urocanate + reduced acceptor

**Notes** This item requires custom production and lead time is between 5-9 weeks. We can custom produce

according to your specifications.

## Storage and Shipping Information

**Storage** Store it at +4 °C for short term. For long term storage, store it at -20 °C $\sim$ -80 °C.
