

(R)-6-hydroxynicotine oxidase

Cat. No. EXWM-1553

Lot. No. (See product label)

Introduction

Description

A flavoprotein (FAD). The enzyme, which participates in nicotine degradation, is specific for (R) isomer of 6-hydroxynicotine, derived from the uncommon (R)-nicotine. The bacterium *Arthrobacter nicotinovorans*, in which this enzyme was originally discovered, has a different enzyme that catalyses a similar reaction with the (S)-isomer (cf. EC 1.5.3.5, (S)-6-hydroxynicotine oxidase).

Synonyms

D-6-hydroxynicotine oxidase; 6-hydroxy-D-nicotine oxidase
