

23S rRNA (uridine2479-2'-O)-methyltransferase

Cat. No. EXWM-1809

Lot. No. (See product label)

Introduction

Description Streptomyces viridochromogenes produces the antibiotic avilamycin A which binds to the 50S ribosomal subunit to inhibit protein synthesis. To protect itself from the antibiotic, Streptomyces viridochromogenes utilizes two methyltransferases, 23S rRNA (uridine2479-2'-O)-methyltransferase and EC 2.1.1.209 [23S rRNA (guanine2535-N1)-methyltransferase], whose actions confer avilamycin resistance to the RNA.

Synonyms AviRb

Product Information

Form Liquid or lyophilized powder

EC Number EC 2.1.1.208

Reaction S-adenosyl-L-methionine + uridine2479 in 23S rRNA = S-adenosyl-L-homocysteine + 2'-O-methyluridine2479 in 23S rRNA

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
