

glycerophospholipid acyltransferase (CoA-dependent)

Cat. No. EXWM-2087

Lot. No. (See product label)

Introduction

Description Catalyses the transfer of fatty acids from intact choline- or ethanolamine-

containing glycerophospholipids to the sn-2 position of a lyso-glycerophospholipid. The organyl group on sn-1 of the donor or acceptor molecule can be alkyl, acyl or alk-1-enyl. The term radyl has sometimes been used to refer to such substituting groups. Differs from EC 2.3.1.147 glycerophospholipid arachidonoyl-transferase

(CoA-independent) in requiring CoA and not favouring the transfer of

polyunsaturated acyl groups.

Product Information

Form Liquid or lyophilized powder

EC Number EC 2.3.1.148

CAS No. 9054-54-0

Reaction 1-organyl-2-acyl-sn-glycero-3-phosphocholine + 1-organyl-2-lyso-sn-glycero-3-

phosphoethanolamine = 1-organyl-2-acyl-sn-glycero-3-phosphoethanolamine + 1-

1/1

organyl-2-lyso-sn-glycero-3-phosphocholine

Notes This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

Storage and Shipping Information

Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
