

1,3-α-oligoglucan phosphorylase

Cat. No. EXWM-2572

Lot. No. (See product label)

Introduction

Description The enzyme, isolated from the bacterium Clostridium phytofermentans, catalyses a

reversible reaction. Substrates for the phosphorolytic reaction are α -1,3-linked oligoglucans with a polymerisation degree of 3 or more. Nigerose (i.e. 3-O- α -D-glucopyranose) is not phosphorylyzed but can serve as substrate

in the reverse direction (cf. EC 2.4.1.279, nigerose phosphorylase).

Product Information

Form Liquid or lyophilized powder

EC Number EC 2.4.1.334

Reaction $[(1\rightarrow 3)-\alpha-D-glucosyl]n + phosphate = [(1\rightarrow 3)-\alpha-D-glucosyl]n-1 + \beta-D-glucose 1-$

phosphate

Notes This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C \sim -80 °C.
