

## tRNA (N6-L-threonylcarbamoyladenine37-C2)-methylthiotransferase

Cat. No. EXWM-3431

Lot. No. (See product label)

### Introduction

#### Description

The enzyme, which is a member of the S-adenosyl-L-methionine-dependent radical (radical AdoMet) enzymes superfamily, binds two [4Fe-4S] clusters as well as the transferred sulfur. The sulfur donor is believed to be one of the [4Fe-4S] clusters, which is sacrificed in the process, so that in vitro the reaction is a single turnover. The identity of the electron donor is not known.

#### Synonyms

MtaB; methylthio-threonylcarbamoyl-adenosine transferase B; CDKAL1 (gene name)

### Product Information

#### Form

Liquid or lyophilized powder

#### EC Number

EC 2.8.4.5

#### Reaction

N6-L-threonylcarbamoyladenine37 in tRNA + sulfur-(sulfur carrier) + 2 S-adenosyl-L-methionine + reduced electron acceptor = 2-methylthio-N6-L-threonylcarbamoyladenine37 in tRNA + S-adenosyl-L-homocysteine + (sulfur carrier) + L-methionine + 5'-deoxyadenosine + electron acceptor (overall reaction); (1a) N6-L-threonylcarbamoyladenine37 in tRNA + sulfur-(sulfur carrier) + S-adenosyl-L-methionine + reduced electron acceptor = 2-thio-N6-L-threonylcarbamoyladenine37 in tRNA + (sulfur carrier) + L-methionine + 5'-deoxyadenosine + electron acceptor; (1b) S-adenosyl-L-methionine + 2-thio-N6-L-threonylcarbamoyladenine37 in tRNA = S-adenosyl-L-homocysteine + 2-methylthio-N6-L-threonylcarbamoyladenine37 in tRNA

#### Notes

This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

### Storage and Shipping Information

#### Storage

Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
