

oligoxyloglucan reducing-end-specific cellobiohydrolase

Cat. No. EXWM-3833 Lot. No. (See product label)

Introduction	
Description	The enzyme is found in the fungus Geotrichum sp. M128. The substrate is a hemicellulose found in plant cell walls.
Product Information	
Form	Liquid or lyophilized powder
EC Number	EC 3.2.1.150
CAS No.	753502-07-7
Reaction	Hydrolysis of cellobiose from the reducing end of xyloglucans consisting of a $(1\rightarrow 4)$ - β -linked glucan carrying α -D-xylosyl groups on O-6 of the glucose residues. To be a substrate, the first residue must be unsubstituted, the second residue may bear a xylosyl group, whether further glycosylated or not, and the third residue, which becomes the new terminus by the action of the enzyme, is preferably xylosylated, but this xylose residue must not be further substituted.
Notes	This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.
Storage and Shipping Information	
Storage	Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
