

Polynucleotide phosphorylase from *Synechocystis* sp., Recombinant

Cat. No. NATE-0610

Lot. No. (See product label)

Introduction

- Description** Polynucleotide phosphorylase (PNPase) is a bifunctional enzyme with a phosphorolytic 3' to 5' exoribonuclease activity and a 3'-terminal oligonucleotide polymerase activity. It is also involved in mRNA processing and degradation in bacteria, plants, and humans.
- Applications** Polynucleotide phosphorylase has been used in a study to discover that a major function of PNPase is the synthesis of CDP. It has also been used in a study to investigate the enzyme responsible for RNA 3'-tail synthesis in *S. coelicolor*.
- Synonyms** PNPase; nucleoside diphosphate:polynucleotidyl transferase; polyribonucleotide nucleotidyltransferase; polynucleotide phosphorylase; polyribonucleotide phosphorylase; EC 2.7.7.8; 9014-12-4

Product Information

- Species** *Synechocystis* sp.
- Source** *E. coli*
- EC Number** EC 2.7.7.8
- CAS No.** 9014-12-4
- Unit Definition** One unit will polymerize 1.0 μ mole of ADP, releasing 1.0 μ mole of inorganic phosphate in 15 minutes, at pH 9.1 at 37°C. Supplied as a solution in 20 mM Hepes buffer pH 7.9, 0.1 mM EDTA, 2 mM DTT, 12.5 mM MgCl₂, 60 mM KCl, 20% (w/v) Glycerol

Storage and Shipping Information

- Storage** -70°C
