

hepsin

Cat. No. EXWM-4101

Lot. No. (See product label)

Introduction

Description This type-II membrane-associated serine peptidase has been implicated in cell

growth and development. The enzyme has been shown to activate blood

coagulation factor VII by cleavage of the Arg152\perp IIe153 peptide bound in BHK cells, thus indicating a possible role in the initiation of blood coagulation. There is no cleavage after aromatic or aliphatic residues. The occupancy of the S2 site is an absolute requirement for catalysis and a basic residue at that site is preferred to an aliphaticresidue. The nature of the residue at S3 also affects hydrolysis, with GIn

being much more favourable than Ala. Belongs in peptidase family S1A.

Product Information

Form Liquid or lyophilized powder

EC Number EC 3.4.21.106

CAS No. 112398-23-9

Reaction Cleavage after basic amino-acid residues, with Arg strongly preferred to Lys

Notes This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

Storage and Shipping Information

Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
