

geosmin synthase

Cat. No. EXWM-4930

Lot. No. (See product label)

Introduction

Description

Requires Mg²⁺. Geosmin is the cause of the characteristic smell of moist soil. It is a bifunctional enzyme. The N-terminal part of the enzyme is EC 4.2.3.22, germacradienol synthase, and forms germacradienol from FPP. The C-terminal part of the enzyme catalyses the conversion of germacradienol to geosmin via (1S,4aS,8aS)-1,4a-dimethyl-1,2,3,4,4a,5,6,8a-octahydronaphthalene.

Product Information

Form

Liquid or lyophilized powder

EC Number

EC 4.1.99.16

Reaction

(1E,4S,5E,7R)-germacra-1(10),5-dien-11-ol + H₂O = (-)-geosmin + acetone

Notes

This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage

Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
