

## 2-iminoacetate synthase

Cat. No. EXWM-4932

Lot. No. (See product label)

## Introduction

**Description**Binds a [4Fe-4S] cluster that is coordinated by 3 cysteines and an exchangeable S-

adenosyl-L-methionine molecule. The first stage of catalysis is reduction of the S-adenosyl-L-methionine to produce methionine and a 5-deoxyadenosin-5-yl radical that is crucial for the conversion of the substrate. The reductant is assumed to be NADPH, which is provided by a flavoprotein:NADPH oxidoreductase system. Part of

1/1

the pathway for thiamine biosynthesis.

**Synonyms** thiH (gene name)

## **Product Information**

**Form** Liquid or lyophilized powder

**EC Number** EC 4.1.99.19

**Reaction** L-tyrosine + S-adenosyl-L-methionine + NADPH = 2-iminoacetate + 4-methylphenol

+ 5'-deoxyadenosine + L-methionine + NADP+ + H+

**Notes** This item requires custom production and lead time is between 5-9 weeks. We can

custom produce according to your specifications.

## Storage and Shipping Information

**Storage** Store it at +4 °C for short term. For long term storage, store it at -20 °C $\sim$ -80 °C.
