

homoaconitate hydratase

Cat. No. EXWM-5027

Lot. No. (See product label)

Introduction

Description

Requires a [4Fe-4S] cluster for activity. The enzyme from the hyperthermophilic eubacterium *Thermus thermophilus* can catalyse the reaction shown above but cannot catalyse the previously described reaction, i.e. formation of (R)-homocitrate by hydration of cis-homoaconitate. The enzyme responsible for the conversion of cis-homoaconitate into (R)-homocitrate in *T. thermophilus* is unknown at present but the reaction can be catalysed in vitro using aconitate hydratase from pig (EC 4.2.1.3).

Synonyms

homoaconitase; cis-homoaconitase; HACN; Lys4; LysF; 2-hydroxybutane-1,2,4-tricarboxylate hydro-lyase (incorrect)

Product Information

Form Liquid or lyophilized powder

EC Number EC 4.2.1.36

CAS No. 9030-68-6

Reaction (1R,2S)-1-hydroxybutane-1,2,4-tricarboxylate = (Z)-but-1-ene-1,2,4-tricarboxylate + H₂O

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
