

hydroperoxide dehydratase

Cat. No. EXWM-5076

Lot. No. (See product label)

Introduction

Description Acts on a number of unsaturated fatty-acid hydroperoxides, forming the corresponding allene oxides. The

product of the above reaction is unstable and is acted upon by EC 5.3.99.6, allene-oxide cyclase, to form the cyclopentenone derivative (15Z)-12-oxophyto-10,15-dienoate (OPDA), which is the first cyclic and biologically active metabolite in the jasmonate biosynthesis pathway. The enzyme from many plants

belongs to the CYP-74 family of P-450 monooxygenases.
