

oligo-alginate lyase

Cat. No. EXWM-5102

Lot. No. (See product label)

Introduction

Description The enzyme degrades unsaturated oligosaccharides produced by the action of alginate lyases (EC 4.2.2.3 and EC 4.2.2.11) on alginate, by repeatedly removing the unsaturated residue from the non-reducing end until only unsaturated monosaccharides are left. The enzyme catalyses a β -elimination reaction, generating a new unsaturated non-reducing end after removal of the pre-existing one.

Synonyms aly (gene name) (ambiguous); oalS17 (gene name); oligoalginate lyase; exo-oligoalginate lyase

Product Information

Form Liquid or lyophilized powder

EC Number EC 4.2.2.26

Reaction Cleavage of poly(4-deoxy- α -L-erythro-hexopyranuronoside) oligosaccharides with 4-deoxy- α -L-erythro-hex-4-enopyranuronosyl groups at their non-reducing ends into 4-deoxy- α -L-erythro-hex-4-enopyranuronate monosaccharides.

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
