

L-arabinose isomerase

Cat. No. EXWM-5475

Lot. No. (See product label)

Introduction

Description Requires a divalent metal ion (the enzyme from the bacterium *Escherichia coli* prefers Mn^{2+}). The enzyme binds the closed form of the sugar and catalyses ring opening to generate a form of open-chain conformation that facilitates the isomerization reaction, which proceeds via an ene-diol mechanism. The enzyme can also convert D-galactose to D-tagatose with lower efficiency.

Synonyms L-arabinose ketol-isomerase; araA (gene name)

Product Information

Form Liquid or lyophilized powder

EC Number EC 5.3.1.4

CAS No. 9023-80-7

Reaction L-arabinose = L-ribulose

Notes This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
