

Native *Aspergillus niger* Cellobiase

Cat. No. NATE-0117

Lot. No. (See product label)

Introduction

Description Cellobiase enzyme preparation obtained by submerged fermentation of an *Aspergillus niger* microorganism. The cellobiase hydrolyzes cellobiose to glucose.

Applications Cellobiase from *Aspergillus niger* has been used in a study to assess the targeted antifungal delivery system of a β -Glucosidase sensitive nystatin-star poly (ethylene glycol) conjugate. Cellobiase from *Aspergillus niger* has also been used in a study to investigate the influence of substrate particle size and wet oxidation on physical surface structures and enzymatic hydrolysis of wheat straw.

Synonyms Novozyme 188; Cellobiase

Product Information

Source *Aspergillus niger*

Form liquid

CAS No. 9033-06-1

Activity > 250 units/g

Storage and Shipping Information

Storage 2-8°C
