

GMP synthase (glutamine-hydrolysing)

Cat. No. EXWM-5805

Lot. No. (See product label)

Introduction

Description

Involved in the de novo biosynthesis of guanosine nucleotides. An N-terminal glutaminase domain binds L-glutamine and generates ammonia, which is transferred by a substrate-protective tunnel to the ATP-pyrophosphatase domain. The enzyme can catalyse the second reaction alone in the presence of ammonia.

Synonyms

GMP synthetase (glutamine-hydrolysing); guanylate synthetase (glutamine-hydrolysing); guanosine monophosphate synthetase (glutamine-hydrolysing); xanthosine 5'-phosphate amidotransferase; guanosine 5'-monophosphate synthetase

Product Information

Form

Liquid or lyophilized powder

EC Number

EC 6.3.5.2

CAS No.

37318-71-1

Reaction

ATP + XMP + L-glutamine + H₂O = AMP + diphosphate + GMP + L-glutamate (overall reaction); (1a) L-glutamine + H₂O = L-glutamate + NH₃; (1b) ATP + XMP + NH₃ = AMP + diphosphate + GMP

Notes

This item requires custom production and lead time is between 5-9 weeks. We can custom produce according to your specifications.

Storage and Shipping Information

Storage

Store it at +4 °C for short term. For long term storage, store it at -20 °C~-80 °C.
