

Glyoxalase I from Human, Recombinant

Cat. No. NATE-1651

Lot. No. (See product label)

Introduction

Description Glyoxalase I is universally expressed and involved in the protection against cellular damage due to

cytotoxic metabolites such as advanced glycation end products (AGEs). It is an integral component of the

detoxification system, catalyzing the conversion of reactive, acyclic a-oxoaldehydes into the

corresponding a-hydroxyacids in a glutathione-dependent manner.

Synonyms lactoylglutathione lyase; EC 4.4.1.5; methylglyoxalase; aldoketomutase; ketone-aldehyde mutase;

glyoxylase I; (R)-S-lactoylglutathione methylglyoxal-lyase (isomerizing); 9033-12-9

Product Information

Species Human

Source E. coli

Form Glyoxalase-1 solution containing 20 mM Tris pH-8, 1mM DTT and 10% glycerol.

EC Number EC 4.4.1.5

Molecular 20.7 kDa

Weight

Purity > 90% by SDS-PAGE

Activity >0.4 units/mg

Unit One unit will form 1.0 umol of S-lactoylglutathione from methylglyoxal and reduced glutathione per

Definition minute at pH 7.5.

Storage and Shipping Information

Storage Glyoxalase-I Human Recombinant although stable at 4 °C for weeks, should be stored desiccated below -

18 °C. Please prevent freeze/thaw cycles.
