Native Chicken α-N-Acetylgalactosaminidase

Cat. No. NATE-0755

Lot. No. (See product label)

Introduction

Description	α-N-acetylgalactosaminidase (EC 3.2.1.49) is a glycoside hydrolase from bacteria and animals, also known as nagalase. The human gene that codes for this enzyme is NAGA. Mutations in this gene and the deficiency in alpha-N-acetylgalactosaminidase activity have been identified as the cause of Schindler disease.
Synonyms	EC 3.2.1.49; 9075-63-2; α-N-acetylgalactosaminidase; Alpha-N-acetylgalactosaminidase; α-acetylgalactosaminidase; N-acetyl-α-D-galactosaminidase; N-acetyl-α-galactosaminidase; α-NAGAL; α-NAGA; α-GalNAcase

Product Information

Species	Chicken
Source	Chicken Liver
EC Number	EC 3.2.1.49
CAS No.	9075-63-2
