

Native Jack bean β -N-Acetylhexosaminidase

Cat. No. NATE-0783

Lot. No. (See product label)

Introduction

Description

The enzyme exhibits a broad specificity, cleaving non-reducing terminal β (1-2,3,4,6)-linked N-acetylglucosamine (GlcNAc) and N-acetylgalactosamine (GalNAc) residues. This enzyme is very useful in the study of isolated glycans, glycolipids and glycoproteins, especially in combination with β -N-acetylhexosaminidase from *S. pneumoniae*.

Synonyms

β -N-Acetylhexosaminidase; N-Acetyl- β -D-glucosaminidase, β -N-Acetylglucosaminidase
