

Native Jack bean β-N-Acetylhexosaminidase

Cat. No. NATE-0783

Lot. No. (See product label)

Introduction

Description The enzyme exhibits a broad specificity, cleaving non-reducing terminal β (1-2,3,4,6)-linked N-

acetylglucosamine (GlcNAc) and N-acetylgalactosamine (GalNAc) residues. This enzyme is very useful in

the study of isolated glycans, glycolipids and glycoproteins, especially in combination with $\beta\textsc{-N-}$

acetylhexosaminidase from S. pneumoniae.

Synonyms β -N-Acetylhexosaminidase; N-Acetyl- β -D-glucosaminidase, β -N-Acetylglucosaminidase
