

Glycine Soja Extract

Cat. No. EXTZ-270

Lot. No. (See product label)

Introduction

Description Glycine soja (Soybean) extract is a component of the soybean plant that's a rich source of antioxidants known as isoflavones. Isoflavones play role in defending skin from environmental aggressors that hinder its appearance. Chief among those isoflavones are daidzein and genistein, both known as phytoestrogens due to their molecular similarity to estrogen. It's important to note that phytoestrogen compounds are not hormones and are widely considered safe for topical use.
