Collagen from Rat Lung

Cat. No. CEFX-006

Lot. No. (See product label)

Introduction

Description	Rat lung tissue was taken to prepare collagen by pepsin-acid extraction, salt precipitation, re-solubilization in acetic acid, and dialysis and re-precipitation in neutral phosphate buffer. Collagen was re-solubilized and lyophilized. Electrophoresis in SDS polyacrylamide showed that the collagen was of high purity with typical migration of γ, β(2), α1, and α2 bands.

Product Information

Species	Rat
Source	Rat Lung
Form	Powder
