

High Purity Elastase, Low Endotoxin, Porcine

Cat. No. CEFX-032

Lot. No. (See product label)

Introduction

Description Pancreatic elastase is a form of elastase that is produced in the acinar cells of the pancreas, initially produced as an inactive zymogen and later activated in the duodenum by trypsin. Elastases form a subfamily of serine proteases, characterized by a distinctive structure consisting of two beta-barrel domains converging at the active site that hydrolyze amides and esters amongst many proteins in addition to elastin, a type of connective tissue that holds organs together. Pancreatic elastase 1 is a serine endopeptidase, a specific type of protease that has the amino acid serine at its active site. Low endotoxin; < 0.78 EU/mg. Further purification of elastase to remove endotoxin by chromatography on immobilized polymyxin B and then filtered on 0.2 µm filter.

Product Information

Species	Porcine
Source	Porcine pancreas
Form	Powder
EC Number	EC 3.4.21.36
Molecular Weight	25500
Unit Definition	One unit will hydrolyze 1µM per minute at pH 8.3 and 25°C.

Storage and Shipping Information

Storage Store 5°C. Stable 9-12 months.
