Ferrous bisglycinate

Cat. No. EXTZ-445

Lot. No. (See product label)

Introduction

Description	Iron is one of the essential trace elements in the human body, which participates in the transport of oxygen and tissue respiration process in the body and maintains the normal hematopoietic function of the body. Iron deficiency reduces the synthesis of hemoglobin and leads to anemia called iron deficiency anemia (IDA). Ferrous Bisglycinate has a high bioavailability and can be used in the treatment of infants with iron deficiency anemia. Ferrous Bisglycinate does not have the iron-like smell of other iron supplements and is an odorless, readily soluble organic iron.
