Zinc bisglycinate granule

Cat. No. EXTZ-447

Lot. No. (See product label)

Introduction

Description	Zinc Bisglycinate is a chelate formed by glycine and zinc, which has a small molecular weight, can be fully absorbed and is stable. Zinc bisglycinate organically combines the essential amino acids and essential trace elements, and does not antagonize with calcium, iron, and other trace elements in the body, thus improving the absorption rate of zinc, which is incomparable with other zinc supplement products.
