Creative Enzymes®

D-Mannose

Cat. No. EXTZ-405

Lot. No. (See product label)

Introduction

Description	D-mannose is an epimeric polymer of glucose at the C-2 position and exists in nature as a component of mannan. It is about 60% as sweet as sucrose. Because the same monosaccharide cannot be hydrolyzed to glucose, it can be used as a sugar substitute for diabetics. D-mannose also has the functions of regulating the immune system, promoting wound healing, anti-inflammation, inhibiting tumor growth, and avoiding bacterial infection.
