Ovalbumin peptide

Cat. No. EXTZ-408

Lot. No. (See product label)

Introduction

Description	Ovalbumin peptide is a mixture of peptides with a relative molecular mass of less than 1,000 obtained from ovalbumin by enzymatic degradation, isolation, and refinement. It contains a small amount of free amino acids, sugars, inorganic salts and other components. Ovalbumin peptide is safe and non-toxic, can provide the body with essential amino acids and energy. It is similar to the composition ratio of human serum protein, and can replace serum protein to assist the operation and metabolism of many substances in the body. It can also regulate immunity, inhibit angiotensin-converting enzyme activity and antioxidant effects.
