

Umbilical Cord Extract

Cat. No. CEFX-044

Lot. No. (See product label)

Introduction

Description Umbilical cord extract is a biologically active substance extracted from the umbilical cord of an animal fetus and contains cytoplasm and extracellular matrix. It has a wide range of biological functions such as lactation, anti-inflammation, fission repair, and regeneration. It has been widely used in the fields of drug development, immune activity, and regenerative medicine. Animal umbilical cord tissue extract possesses important biological functions, such as anti-inflammatory, fission repair, and regeneration, and can be used in anti-inflammatory-related products, such as standing skin and oral protection, and drug development, such as cancer drugs and antiviral drugs.
