Vitamin K2 Powder

Cat. No. CEFX-106

Lot. No. (See product label)

Introduction

Description	Vitamin K2 is a fat-soluble vitamin, a derivative of the naphthoquinone moiety that is biologically active in chlorophyll quinone, and is an essential vitamin in the human body. Vitamin K2 (MK-7) is a type of vitamin K2, i.e., it contains seven isoprenoid units on the side chain.
Applications	The primary function of vitamin K2 is to promote the absorption and utilization of calcium and to localize calcium into bones and teeth, thereby serving to maintain bone health and prevent osteoporosis. In addition, vitamin K2 may also play a role in cardiovascular health, immunomodulation, and neuroprotection.

Product Information

Appearance	Light yellow powder
Form	powder
CAS No.	84-81-1
Molecular Weight	580.88

Storage and Shipping Information

Storage	Keep sealed, away from light and in a dry place (recommended storage temperature below 26°C).
