

Tetrahydrocurcuminoid

Cat. No. CEFX-135

Lot. No. (See product label)

Introduction

Description

Tetrahydrocurcumin (THC), as the active and main metabolite produced by curcumin in living organisms, is hydrogenated from curcumin isolated from the rhizome of turmeric, a plant of the ginger family. Tetrahydrocurcumin is the main whitening active ingredient in natural turmeric root extract, which not only has the strongest tyrosinase inhibiting activity, but also has excellent chemical stability and the appearance of odourless white powder, thus overcoming the defect of ordinary turmeric extract which is chemically unstable and easy to stain the skin.

Product Information

Form	Powder
CAS No.	36062-04-1
Purity	99%

Storage and Shipping Information

Storage	Keep sealed, away from light and in a dry place (recommended storage temperature below 25°C).
