Amla macerate

Cat. No. EXTZ-488

Lot. No. (See product label)

Introduction

Description Amla macerate is obtained in the process of maceration, which is a room temperature process of extracting plant material in sunflower oil as a solvent. Given the specific nature of this method, it cannot be used to fully extract active substances. Extraction continues to the point in which equalized concentration of the extracted compounds is achieved between the solvent and the plant material. Amla macerate is only cosmetic grade.
