Black Soybean Peptide

Cat. No. CEFP-018

Lot. No. (See product label)

Introduction

Description	Black soybean is a potential resource of high quality plant protein. It is rich in many biologically active amino acid sequences. Through protease hydrolysis, active peptides can be released. Black soybean peptides have a variety of physiological functions, including antioxidant, anti-fatigue and hypolipidemic effects. They are a class of small-molecule peptides with small relative molecular weights that can easily enter the bloodstream and positively affect the body. In addition, black beans are widely used in the fields of food, medicine and chemical industry, and have a broad application prospect.

Product Information

Source	Black Soybean
Appearance	Off-white powder
Molecular Weight	<1000 Da
Purity	99%
Solubility	Water-soluble

Usage and Packaging

Package	1kg, 5kg, 10kg aluminum foil vacuum bag; or 20kg, 25kg Fiber Drum

Storage and Shipping Information

Storage	Store in a cool, ventilated and dry place, avoid direct sunlight.
